## WHAT IS CLAIMED IS:

5

10

1. For use as a hard disk drive having a motor and high voltage components, a shield comprising

a plate having a shape to fit over the drive, said plate being formed with louvers to dissipate heat to the atmosphere.

- 2. A shield according to claim 1 in which said louvers are fixed outwardly slanted fins stamped from said plate.
  - 3. A shield according to claim 2 in which said plate is formed of thin metal.
  - 4. A shield according to claim 3 in which said metal is highly heat conductive.
- 3. A shield according to claim 1-shield is formed with outward-upward slanted end edges.
- 6. A shield according to claim I in which said shield is formed with screw holes spaced in a standard pattern.
- 7. A shield according to claim 6 in which said shield is formed with a depression located to contact the motor when said shield is attached to the drive by means of said screw holes.
